

ADVANCED INSTAGRAM FEED MODULE

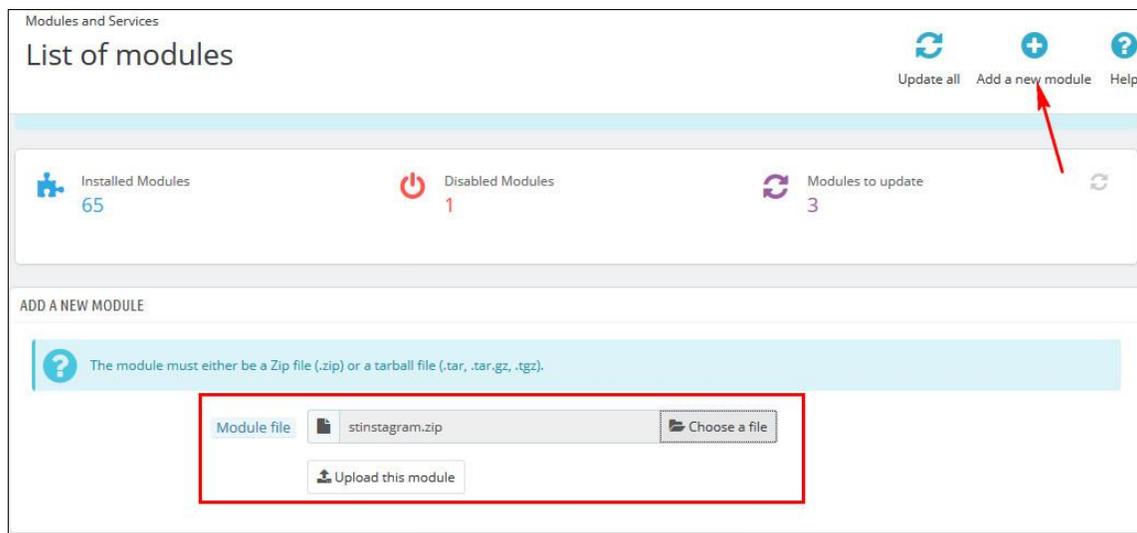

A premium module for Prestashop

Compatible with PrestaShop 1.6.* and 1.7.*.

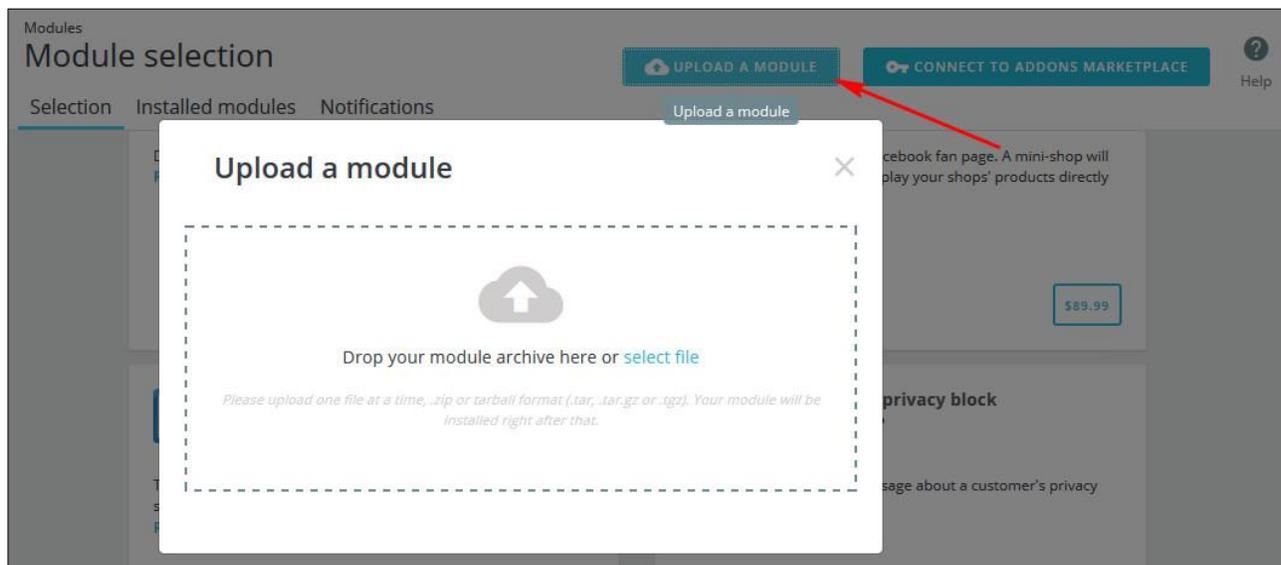

How to install?

Video guide here:

1. Go to “BO > Modules” page.
2. Click on “Add a new module” or “Upload a module” button.

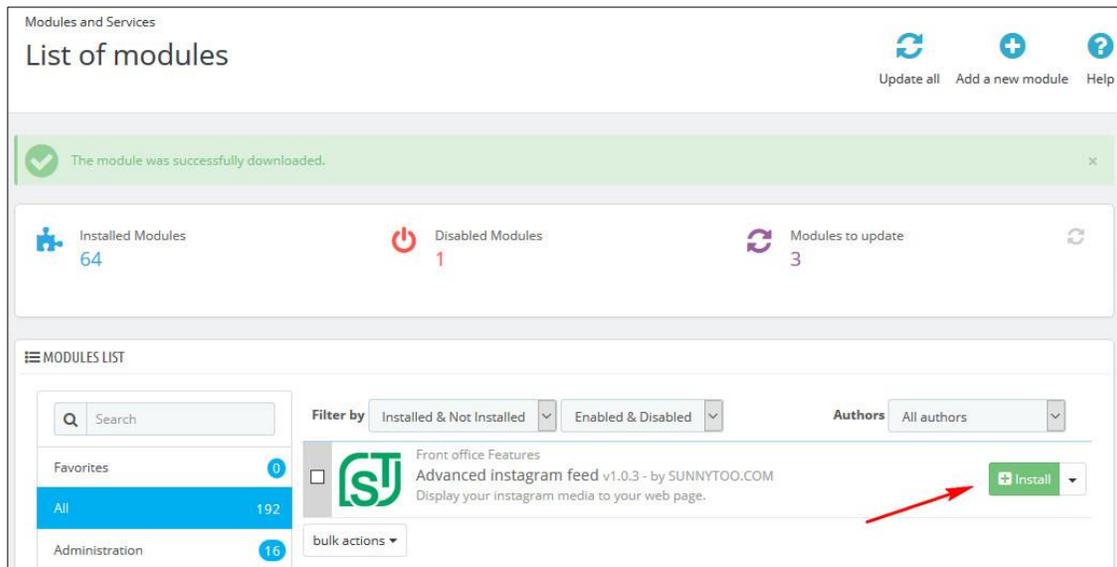

Prestashop1.6

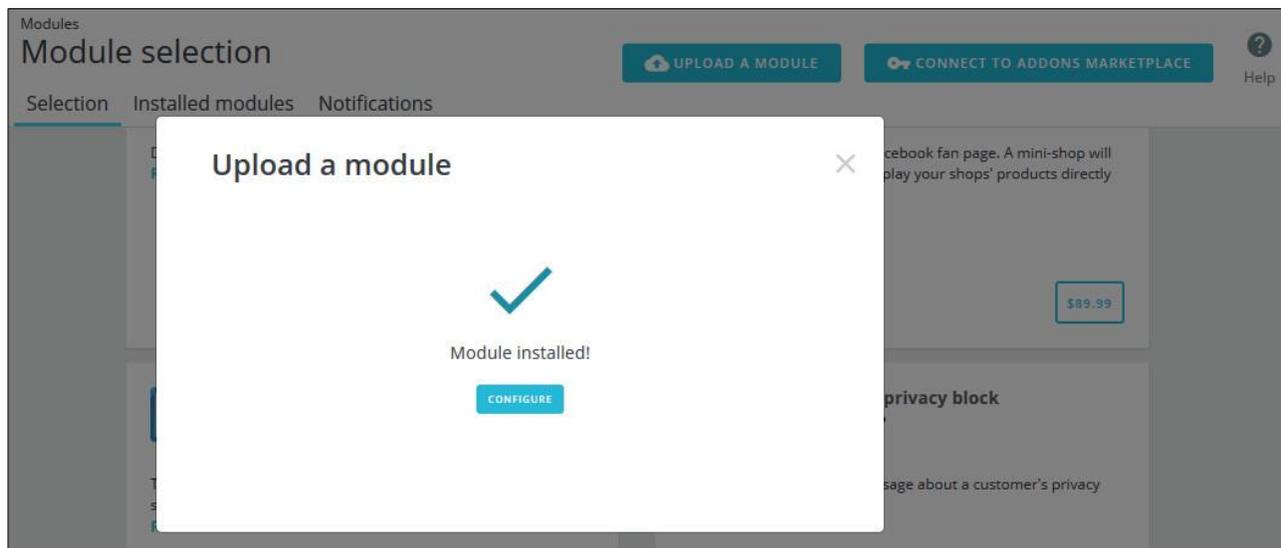

Prestashop1.7

3. If you are using Prestashop1.6, then click on the “Install” button on the next page.

Prestashop1.6

4. If you are using Prestashop1.7, then Prestashop will automatically install the module.

5. Congratulations! You have installed the module!

How to upgrade on prestashop1.6 and 1.7?

1. Go to "BO > Modules" page.
2. Click on "Add a new module" or "Upload a module" button to re-upload the module to update it.

The first thing you need to do after installation.

Click on the link marked in red to get an access token from Instagram, and then you can get media from Instagram.

How to get media from Instagram?

Currently you have 4 options, see the image below.

General settings
⚙️ SOURCES

[How to display media information](#)
[Color settings](#)
[Settings for displaying media in a slider](#)
[Settings for displaying media on left or right column and footer](#)

Media: Get the most recent media published by you.
 Get media from a tag. You need to fill in the Tag field below
 Get a list of recent media from a given location. You need to fill in the Location ID field below
 Get a list of recent media in a given area. You need to fill in the Latitude, Longitude and Distance fields below

Tag:
Fill in one tag, without "#"
If you fill in this field, media from Instagram have this hashtag will be displayed, not from the user you filled above.

Location ID:
For example when you search for Paris on Instagram, you will get this link
<https://www.instagram.com/explore/locations/6889842/paris-france/>. 6889842 is the location ID for Paris

Latitude:
You can use Google map to get Latitudes and Longitudes. Right-click on a location to get its latitude and longitude.

Longitude:

Distance:
Max distance is 5000m.

1. Get the most recent media published by you.

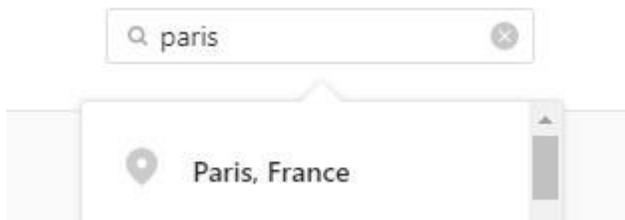

Get recent media published by the account which you used to connect with Instagram.

2. Get media from a tag.

Hashtag. Fill in just **one** hashtag, **without "#"**. If you fill in this field, media from Instagram has this tag will be displayed, **not from the user you filled above**. Instagram does not provide a way to get media from a specific account by hashtag. An alternative way is using your unique hashtags. For example, if you want to show media for winter sale out, you can add them an unique hashtag like this #yoursitenameweintersale to get them out. Basically a hashtag like that one is an unique one.

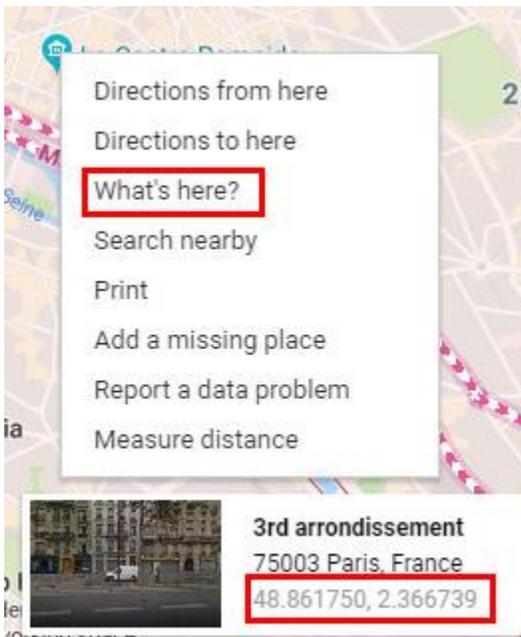

3. Get a list of recent media from a given location.

How to get location ID? Let's use Paris as an example, search it on Instagram, you will get this link <https://www.instagram.com/explore/locations/6889842/paris-france/>. The location ID of Paris is in that link which is 68889842

4. Get a list of recent media in a given area.

You can use google map to get Latitudu and Longittude. **Right click** on a place, and then click on the "What's here" menu item, a popup window will show out on the bottom with its Latitudu and Longittude.

In the new API, it's not possible to get media via Usernames and Self liked media any more.

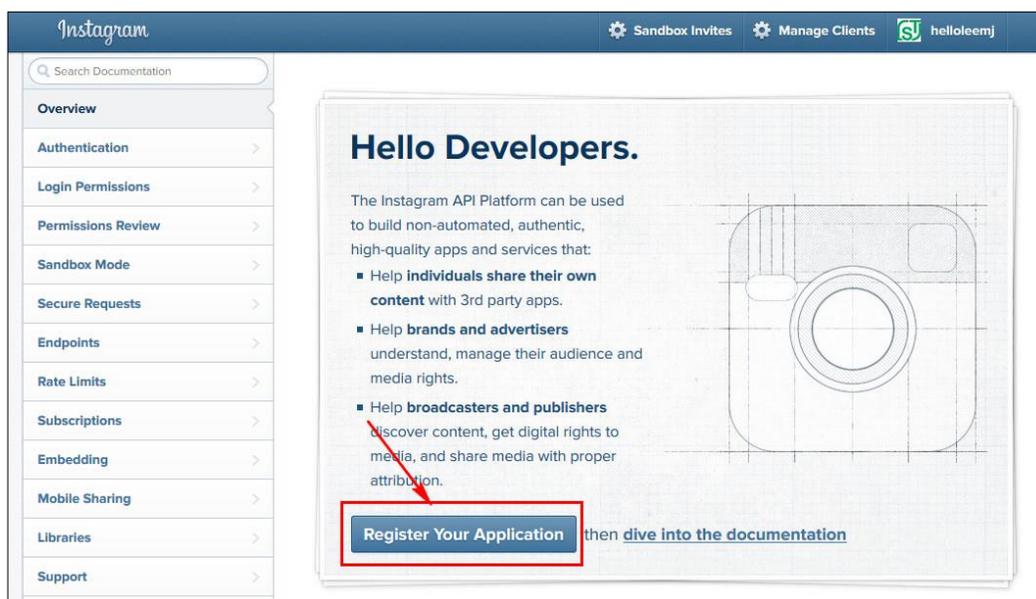

How to get a Client ID?

Generally you do not have to create clients on Instagram, you basically can do everything with the default client ID, only when you want to display your self liked media on your site, only in that case, you have to create a client on Instagram.

This module would work 100% fine to show media from Instagram

1. Log into the developer page

Go to the Instagram <http://instagram.com/developer> and log in with your Instagram account. Click on

Register Your Application.

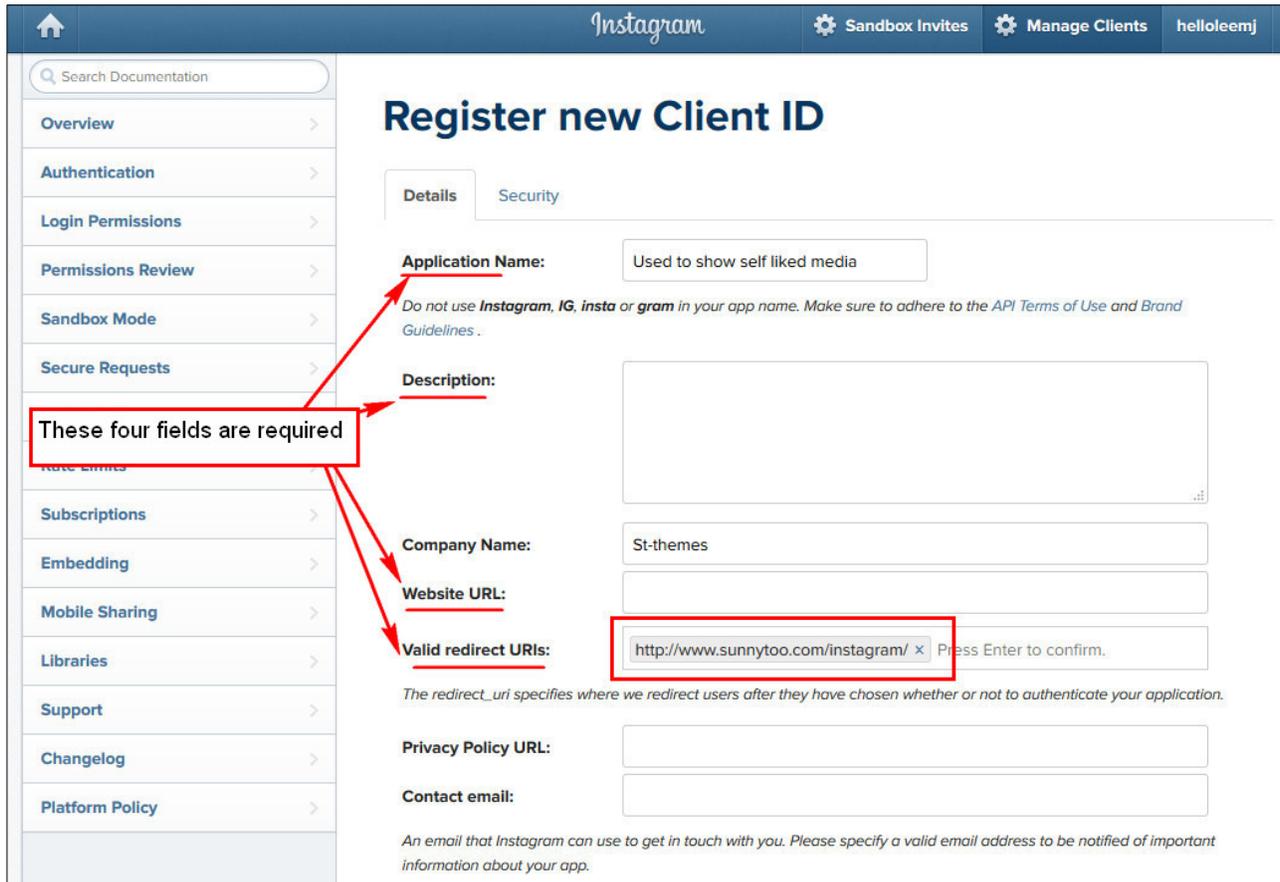

2. Register your app

Click on the Register a New Client button.

3. Complete information

Fill in the Valid redirect URI with `http://www.sunnytoo.com/instagram/`

4. Get your Client ID

Instagram | Sandbox Invites | Manage Clients | helloleemj

Search Documentation

Overview > Authentication > Login Permissions > Permissions Review > Sandbox Mode > Secure Requests > Endpoints > Rate Limits >

Manage Clients

Report Issue Register a New Client

Successfully registered 'Used to show self liked media'

Used to show self liked media [DELETE] [MANAGE]

CLIENT INFO

CLIENT ID: c9158ec863c74d24ae7a3b4e094dad2

CLIENT STATUS: Sandbox Mode

Used to show self liked media

Where is the Client ID field?

ADVANCED SETTINGS

* Client ID for advanced users: 1f65a424c15341a3b2cfe7c7ea7a78cf

Do not change the vaule, except you want to display your liked media. This module would work 100% fine to show your images using the default value. The reset help information is for advanced users.

How to get the Client ID ? click [here](#) or [use default](#).

Important the Valid redirect URI must be <http://www.sunnytoo.com/instagram/> when you register new client on instagram.

How to set the number of media per row?

There are 6 drop down lists.

The number of columns on home page:

Large devices	Medium devices	Small devices	Extra small devices
<input type="text" value="5"/>	<input type="text" value="5"/>	<input type="text" value="4"/>	<input type="text" value="3"/>
Extremely small devices	Full screen		
<input type="text" value="2"/>	<input type="text"/>		

The "Full screen" drop down list is for advanced users, leave it empty if you do not know how to use it. . Setting a value for it can make the module to be full screen if in a full screen hook, that means if it is empty and the module is in a full screen hook, the module would be boxed, not full screen.. It does not take effect in grid view.

Let me take about the very last one “Full screen”, it is for full screen blocks. Setting a value for it can make the module to be full screen if in a full screen hook, that means if it is empty and the module is in a full screen hook, the module would be boxed, not full screen. **The value only take effect in slider layout, not in grid layout, that means in gird layout the value is used to make the module to display in full screen, but the number of meida per row is the value of "Large devices" drop down list.**

How to have full screen hooks for Prestashop1.6?

If you are using Prestashop1.6 + standard theme, you can add two full screen hooks to your site by editing two files to display media in full screen, one is blow the menu, another one is above the footer.

\themes\default-bootstrap\header.tpl

```
{hook h="displayStFullWidth" }
```

```

108
109
110
111
112
113
114
115
116 {hook h="displayStFullWidth"}
117 <div class="columns-container">
118   <div id="columns" class="container">
119     {if $page_name != 'index' && $page_name != 'pagenotfound'}
120     {include file="$tpl_dir./breadcrumb.tpl"}
121     {/if}
122     <div id="slider_row" class="row">
123       {capture name='displayTopColumn'}{hook h='displayTopColumn'}{/capture}
124       {if $smarty.capture.displayTopColumn}
125         <div id="top_column" class="center_column col-xs-12 col-sm-12">{$smarty.capture.displayTopColumn}</div>
126       {/if}
127     </div>
128     <div class="row">
129       {if isset($left_column_size) && !empty($left_column_size)}
130       <div id="left_column" class="column col-xs-12 col-sm-{$left_column_size|intval}">{$HOOK_LEFT_COLUMN}</div>
131       {/if}
132       {if isset($left_column_size) && isset($right_column_size){assign var='cols' value=(12 - $left_column_size - $r
133       var='cols' value=12){/if}
134       <div id="center_column" class="center_column col-xs-12 col-sm-{$cols|intval}">
135

```

\themes\default-bootstrap\footer.tpl

```
{hook h="displayStFullWidthBottom" }
```

```

25 {if !isset($content_only) || !$content_only}
26     </div><!-- #center_column -->
27     {if isset($right_column_size) && !empty($right_column_size)}
28         <div id="right_column" class="col-xs-12 col-sm-{$right_column_size|intval} column">
29             {if}
30         </div><!-- .row -->
31     </div><!-- #columns -->
32 </div><!-- .columns-container -->
33 {hook h="displayStFullWidthBottom"}
34 {if isset($HOOK_FOOTER)}
35     <!-- Footer -->
36     <div class="footer-container">
37         <footer id="footer" class="container">
38             <div class="row">{$HOOK_FOOTER}</div>
39         </footer>
40     </div><!-- #footer -->
41 {/if}
42 </div><!-- #page -->
43 {/if}
44 {include file="$tpl_dir./global.tpl"}
45 </body>
46 </html>

```

How to have full screen hooks for Prestashop1.7?

Prestashop1.7 has 3 full screen hooks by default. But 2 of them are useless(`displayBeforeBodyOpeningTag` and `displayAfterBodyOpeningTag`), the reset one is `displayNavFullWidth` which works exactly the same as the `displayStFullWidth` in Prestashop1.6 to show media blow the menu, so we just need to add the `displayStFullWidthBottom` in Prestashop1.7. You can add a full screen hook to the bottom of your site by adding this code to the `\themes\classic\templates\index.tpl`

```

{block name="footer" prepend}
    {hook h="displayStFullWidthBottom"}
{/block}

```

```

25 {extends file='page.tpl'}
26
27     {block name='page_content_container'}
28         <section id="content" class="page-home">
29             {block name='page_content_top'}{/block}
30             {block name='page_content'}
31                 {$HOOK_HOME nofilter}
32             {/block}
33         </section>
34     {/block}
35
36     {block name="footer" prepend}
37         {hook h="displayStFullWidthBottom"}
38     {/block}

```

Short code feature.

Short code feature allows you to display Instagram blocks anywhere you want if you are running on PrestaShop1.7. If you are running on PrestaShop1.6 then short code feature only works for CMS pages and product descriptions.

Don't put short codes in any other tags but <div></div>, like these ones are wrong, they might cause your site misplaced.

```

<h3><div>[stinstagram id="17"]</div></h3>
<p><div>[stinstagram id="17"]</div></p>
<span><div>[stinstagram id="17"]</div></span>
<a href="#"><div>[stinstagram id="17"]</div></a>

```

These ones are correct.

```

<div>[stinstagram id="17"]</div>
<div>It's okay to use nested div tags<div>[stinstagram id="17"]<div></div>

```

1. Copy this code.

Don't not place it into any hooks.

Id	Title	User name	Short code	Hook into	Position
17		helloleemj	<u><div>[stinstagram id="17"]</div></u>		0

2. Click on this button.

3. Paste the code here.

Don't paste codes here.

```

<h2>Shipments and returns</h2>
<div>[stinstagram id="17"]</div>
<h3>Your pack shipment</h3>
<p>Packages are generally dispatched within 2 days after receipt with tracking and drop-off without signature. If you prefer delivery an additional cost will be applied, so please contact us before making your choice you make, we will provide you with a link to track your package.</p>
<p>Shipping fees include handling and packing fees as well as transport fees, whereas transport fees vary according to total weight of the shipment in one order. We cannot group two distinct orders placed separately of them. Your package will be dispatched at your own risk, but we will ensure that your objects are protected.<br /><br />Boxes are amply sized and your items are protected.
  
```
